NOAM FELUS

DATA ENGINEERING STUDENT | ASPIRING DATA SCIENTIST & ML ENGINEER

Yavne, Israel | noam.felus2@gmail.com | 052-8357064 | Linkedin | Github | Personal Website

PROFESSIONAL SUMMARY

Second-year Data Engineering B.Sc. student at Ben-Gurion University (GPA: 89) with hands-on experience in Deep Learning, NLP transformers (PyTorch), and predictive modeling. Strong mathematical background combined with data pipeline engineering and combat leadership experience, seeking a Data Science / Machine Learning Internship.

EDUCATION

B.Sc. in Data Engineering 2024 – Present

Ben Gurion University of the Negev (GPA: 89) Be'er Sheva

- Key Coursework: Probability & Statistics, Advanced Calculus, Linear Algebra, Discrete Math, Data Structures & Algorithms.
- Honors & Early Achievements: Awarded Ministry of Education Certificate of Excellence; Computer Science Final Project (Score: 100/100).

TECHNICAL PROJECTS

The projects below are personal, self-initiated builds developed outside university coursework to deepen my learning in machine learning, data engineering, and software development.

RouteMaker – Intelligent Travel Route Planner & NLP Classifier Deep Learning, PyTorch, Transformers, Python

- Fine-tuned a RoBERTa transformer for Multi-Label Classification across 10 semantic categories to deliver intent-driven preference scoring.
- Built an end-to-end data pipeline: ingested, cleaned, and deduplicated unstructured travel-blog corpora into structured destination profiles.
- Deployed an interactive Streamlit application integrating inference, route-matching heuristics, and automated PDF/KML route export.

Smart Home Motion Automation – Edge Computer Vision Computer Vision, YOLOv8, PyTorch, OpenCV

- Built an edge vision system using YOLOv8-Pose and cosine similarity to map physical activity into auditable Home Assistant triggers.
- Enforced a local, zero-latency inference pipeline ensuring complete data privacy with no external streaming.

Flight Price Optimizer & Predictive Modeling Machine Learning, Scikit-Learn, SHAP, Python

- Trained predictive ML models to identify cost-optimal booking windows, utilizing SHAP values for feature attribution and interpretability.
- Shipped an interactive desktop GUI providing real-time inference and dynamic visualization of price drivers.

TECHNICAL SKILLS

Core ML & Deep Learning	Deep Learning, PyTorch, Hugging Face Transformers, Transfer Learning, Multi-Label Classification, YOLOv8, OpenCV, Scikit-Learn, SHAP
Data & Engineering	Pandas, NumPy, Feature Engineering, EDA, BeautifulSoup, Selenium, ETL Pipelines, Statistical Modeling
Languages & Tools	Python, SQL, Java, C#, Git, Streamlit, Linux/macOS

MILITARY SERVICE

Combat Soldier | Paratrooper Brigade 890 Mar 2021 – Dec 2023

Israel Defense Forces (Certified Fighter 07)

- Demonstrated high resilience, rapid operational decision-making, and disciplined teamwork under extreme pressure.

CONTINUOUS LEARNING & CERTIFICATIONS

Continuous Learning	AI Roadmap & Knowledge Portal – Personal portal documenting hands-on deep learning workflows, architectures, and guides.
Certifications	Technological Qualification Certificate (Ministry of Education) | Technological Leadership: Ness Technologies (CTM-Ed)
Languages	Hebrew (Native), English (Highly Proficient)
